CASCA 1991 ANNUAL GENERAL MEETING

The 22nd Annual General Meeting of CASCA, co-sponsored by York University and the Institute for Space and Terrestrial Science, will be held on the campus of York University in Toronto from 10-12 June 1991. A detailed description of this meeting was provided in the preliminary announcement booklet that was mailed in late February to all registered CASCA members. If for some reason you did not receive the information booklet, please contact me as soon as possible at the address below and I will be happy to forward a copy, although it may be more expeditious to refer to a colleague's booklet at this point.

Deadlines:

Completed Registration and Abstract forms (found in both English and French at the end of the announcement booklet) must be postmarked no later than **19 April 1991**. The deadline for the Accommodation form is **10 May 1991**. Forms sent by FAX or e-mail cannot be accepted.

Scientific Schedule:

The first day of the meeting, Monday 10 June, will feature three invited talks: two will be devoted to *Scientific Results from HST*, and the third will be the R. M. Petrie Memorial Lecture. An optional education session, *Teaching Science Through Astronomy*, will be held in the early evening. The H. S. Hogg Public Lecture, co-sponsored by CASCA and the Royal Astronomical Society of Canada, will be delivered by Professor K. Inman later in the evening.

The second day of the meeting, Tuesday 11 June, has been designated "theme day" and will be devoted to the James Clerk Maxwell Telescope. Co-organized by the HIA, a number of national and international invited speakers will present review talks on a wide variety of subjects from star formation to quasars.

The final day of the meeting, Wednesday 12 June, will feature a lecture by the Plaskett Medal winner.

Other Events:

We encourage participants who arrive before noon on Sunday 9 June to participate in a special "CASCA tour"

of the McMichael Art Collection — an extensive collection of *Group of Seven* and other Canadian paintings. A welcoming reception will be held on Sunday evening in the Faculty Club. The Society banquet will take place on the evening of Tuesday 11 June in the Canada West Dining Room at Black Creek Pioneer Village which is situated next to York University. The Society's Annual Business meeting and CITA's Annual General Meeting will take place in the afternoon of Wednesday 12 June.

For a more complete summary of the upcoming meeting, please refer to the preliminary announcement booklet (especially with respect to travel and accommodation details). Graduate students should take particular note of the *Spar* and *COMDEV* bursaries established for this meeting. These bursaries are intended to provide partial financial assistance for (some) graduate students who present either an oral or poster paper. Because of the limited amount of funding, the local organizing committee will decide the award winners and size of each award after the registration deadline.

For further programme information (or when all else fails) please contact:

MICHAEL DE ROBERTIS
CHAIRMAN
LOCAL ORGANIZING COMMITTEE

JOB OPENING SAINT MARY'S UNIVERSITY

The Department of Astronomy at Saint Mary's University anticipates that there will be a vacancy this spring at the position of Department Technician. This is a faculty support position requiring a university degree and related experience. Interested persons should contact the Chairperson, Department of Astronomy, Saint Mary's University, Halifax, NS B3H 3C3 (E-mail: TURNER@HUSKY1.STMARYS.CA) to receive a formal job notice when it appears.

POSTDOCTORAL POSITION IN ASTRONOMY AND ASTROPHYSICS
POSTE DE STAGIAIRE POST-DOCTORAL EN ASTRONOMIE ET ASTROPHYSIQUE
LABORATOIRE D'ASTROPHYSIQUE, DEPARTEMENT DE PHYSIQUE
UNIVERSITE LAVAL

We invite applications for a one-year post-doctoral position at the Astrophysics Laboratory of the Physics Department to begin not later than 1 September 1991. Subject to fund availability this position could be renewed. The successful candidate will spend 80% of his/her time on research (collaboration with staff members is encouraged), and 20% managing the Laboratory's SUN environment which includes Sun 3, Sun 4, and Sparc 1+ workstations running IRAF/STSDAS, AIPS etc. Thus, some familiarity with the Unix Operating System, or a willingness to acquire it, is required. The Computer Center offers a VAX 6230 running VMS and a Convex 250. Université Laval provides access to a superbly equipped 1.6 m optical telescope at the Mont Mégantic Observatory which is operated jointly with Université de Montréal. Both Departments form an Astronomy Center. In addition, the successful candidate will have access to all Canadian national facilities. The main interests of the staff, composed of E. F. Borra, E. Hardy, G. Joncas, S. Pineault, and J.-R. Roy, lie in the areas of galaxies, cosmology, star formation and the interstellar medium, compact objects, and instrumentation. Observational and theoretically-oriented candidates are encouraged to apply. Candidates should submit a curriculum vitae, description of interests, publication list, and have three letters of recommendation sent directly, all by 1 June 1991.

Internet: hardy@phy.ulaval.ca

Le Laboratoire d'astrophysique du Département de Physique de l'Université Laval fait un appel de candidatures pour un poste de stagiaire post-doctoral, débutant au plus tard le 1er septembre 1991. Selon les fonds disponibles, ce poste pourrait être renouvelé au delà de la première année. Le(s) candidat(e)s devra consacrer 80% de son temps à la recherche (la collaboration avec les autres membres du groupe est encouragée), et 20% à la gestion du système informatique du Laboratoire, comprenant des stations de travail Sun 3, Sun 4 et Sparc 1+ utilisant les logiciels IRAF/STSDAS, AIPS, etc. En conséquence, une connaissance du système d'exploitation Unix ou la volonté de l'acquérir est nécessaire. Le Centre de calcul de l'Université est muni d'un VAX 6230 opérant sur VMS, ainsi que d'un Convex 250. L'Université Laval donne accès à un télescope optique de 1,6 m de diamètre possédant une instrumentation des plus complètes. Ce télescope, situé à l'Observatoire du Mont Mégantic, est opéré conjointement avec l'Université de Montréal avec laquelle nous formons un Centre d'Astronomie et d'Astrophysique. De plus, la personne choisie aura accès à toutes les installations nationales. Les principaux intérêts du groupe, composé de E.F. Borra, E. Hardy, G. Joncas, S. Pineault et J.-R. Roy, résident dans les domaines suivants: galaxies, cosmologie, formation d'étoiles et milieu interstellaire, objets compacts, et instrumentation. Aucune distinction ne sera faite entre les candidat(e)s en ce qui a trait à leur orientation, qu'elle soit observationnelle ou théorique. Les personnes intéressées doivent demander que trois lettres de recommandation soient expédiées directement à l'adresse ci-dessous, et faire parvenir leur curriculum vitae, une description de leurs intérêts et la liste de leurs publications, le tout, avant le 1er juin 1991.

SUMMARY OF THE 1990 D.R.A.O. USERS' COMMITTEE REPORT

The 1990 DRAO Users' Committee comprised R. Perley (Chairman), J. Bally, M. Fich, S. Pinealt and D. Routledge. The Committee met at D.R.A.O. on the 19th and

20th of October, 1990 to hear briefs from various senior members of the staff, and to consult with staff members on subjects within the terms of reference for the com-

mittee. These terms of reference require the committee to examine and report on five operational areas: (1) the state of the Observatory; (2) the support given to users; (3) telescope scheduling policies; (4) priorities assigned to development projects; and (5) direction of future technical efforts related to DRAO observing facilities. The following paragraphs summarize the Committee's report.

The Committee is very satisfied with the progress made in the last year towards completion of the 7-element Synthesis Telescope ('ST') project. The array will be finished in mid-1991, only a few months behind the originally proposed schedule. The DRAO staff and administration are of outstanding calibre and deserve congratulations on this impressive achievement, obtained despite chronic problems with funding and manpower. However, the committee is very concerned with predictions that staff levels will not rise, and that annual funding may actually decline from present levels. We feel that addressing these needs is of the highest priority for HIA management. The 7-element ST is a world-class instrument, uniquely suited for the study of Galactic emission, and should be supported at a level concomitant with its capabilities.

The Committee feels that staff support for visiting users is of the highest quality. However, it is very clear that future needs in this area will greatly exceed those required for the old, 4-element array, since the data flow and the mapping rate will be very much higher than before. A critical need for rapid and efficient data calibration and imaging software will accompany completion of the array but progress towards developing this software is severely restricted by limits in staff levels. The committee

notes with satisfaction that progress toward procurement of suitable computing hardware is good.

On a related issue, the Committee notes that optimal use of the seven-element ST will require a greater number of external users, and recommends that suitable advertisement to the world's astronomers be made to inform potential users of the unique abilities of the array. The expected increase in external use of the array will require that the array's data be easily exported to allow analysis at the users' home institution. The committee recommends that calibrated data be made routinely available in UVFITS format for this purpose. Further, the committee recommends that HIA offer a modest travel support program, similar to those offered by national facilities in other countries, in order to encourage external users to visit the DRAO.

The committee is satisfied with telescope scheduling policies, and recommends no change in the policies for future scheduling of the 7-element ST.

In the area of priority given to development projects, the committee recommends the highest priority be given to completion of the array, and to development and support of software required to handle the array's data. Beyond these, the committee feels that continued low-level support of the 26-meter is well justified, and supports limited development of the solar monitoring program with the goal of increasing the efficiency of that service.

Finally, the committee supports the 'Radio Schmidt' concept, and recommends further development of the proposal.

JOURNAL OF THE ROYAL ASTRONOMICAL SOCIETY OF CANADA

This is to draw the attention of members of CASCA to the above JOURNAL, and to say that we very much welcome papers and articles in English or in French from professional astronomers. We publish articles of general interest from both amateurs and professionals on a wide variety of astronomical topics, but we also particularly welcome original research papers. The JOURNAL is the only Canadian astronomical journal in which Canadian professional astronomers can publish the results of their research, and I, with the support of the National Council of the R.A.S.C., am committed to maintaining the high international standards that were set for the JOURNAL by my predecessors. Most of the invited papers and several of the contributed papers from the 1989 "Kingston" conference were published in the JOURNAL, and we were

very grateful to the organizers of that conference for this encouragement. We do have to ask authors with access to institutional or grant funds to pay a page charge of \$60 per page, and we provide 50 free offprints to those authors who can do this. All papers, whether general articles or research results, amateur or professional, invited or contributed, are fully refereed to professional standards, and should be cited as such in grant applications and curricula vitarum.

INVITATION FROM THE R.A.S.C. INVITATION DE LA S.R.A.C.

The year 1990 will be remembered by RASC members, for it was marked by special ceremonies on the occasion of the 100th anniversary of the Society's incorporation.

At the beginning of its history many professional astronomers played a most important role in the conduct of the affairs of the Royal Astronomical Society of Canada; and today, although to a lesser extent, many of them continue to do so. As membership grew over time, the weight of amateurs has become proportionally more important. This is not a bad thing in itself, because more amateurs means more people selling the science of astronomy and getting public support.

Nonetheless we at the RASC wish continued cooperation with professional astronomers, and I am pleased to use this opportunity to invite CASCA's members to join us. Membership in the RASC provides many benefits, among them a copy of the Observer's Handbook and a subscription to the Journal. The latter is the only Canadian astronomical publication devoted to professional papers. The Society publishes this Journal bimonthly. Individual membership is \$32.00 per year or \$640 life. Sorry, institutions can not apply for membership, though they can subscribe to the Journal at the cost of \$72.00 per year. Single copies of the Journal are \$12.00, and of the Observer's Handbook, \$13.50. Bulk prices depend on the quantity ordered.

Application for membership or enquiries regarding our publications should be addressed to:

R.A.S.C.
136 Dupont Street
Toronto, ON
M5R 1V2 TEL: (416)924-7973

Yours Sincerely,
Damien Lemay
President, RASC

L'année 1990 va demeurer dans la mémoire des membres de la SRAC, parce qu'elle fut marquée de cérémonies spéciales à l'occasion de son 100iéme anniversaire d'incorporation.

Au début de son histoire, plusieurs astronomes professionnels ont joué un rôle des plus importants dans l'administration de la Société Royale d'Astronomie du Canada; et aujourd'hui, bien qu'à un niveau moindre, plusieurs d'entre eux continuent à le faire. Avec le temps, à mesure que le membership augmente, proportionnellement le poids des amateurs est devenu de plus en plus important. Ce n'est pas une mauvaise chose en soit, parce que plus d'amateurs signifient plus de personnes qui vulgarisent la science de l'astronomie et qui cultivent ainsi le support du public.

Néanmoins, nous de la SRAC, souhaitons continuer à coopérer avec les astronomes professionnels, et il me fait plaisir d'utiliser l'opportunité qui m'est donnée d'inviter les membres de CASCA à se joindre à nous. Etre membre de la SRAC fournit plusieurs bénéfices, dont une copie de l'Observer's Handbook et une souscription au Journal. Ce dernier est la seule publication Canadienne dévouée aux articles des astronomes professionnels. La Société publie le Journal sur une base bi-mensuelle. Le membership individuel est de \$32.00 par année ou \$640.00 pour membre à vie. Désolé, les institutions ne sont pas acceptées comme membre, mais peuvent souscrire au Journal au coût de \$72.00 par année. A l'unité, le Journal se vend \$12.00, et l'Observer's Handbook, \$13.50. Il y a des prix réduits pour les commandes de gros, dépendant des quantités requises.

Adresser vos inscriptions ou commandes pour publications à:

A. PREPRINTS OF RESEARCH PAPERS

The following is a list of preprints written by Canadian astronomers and received at the Astronomy library within the dates given above. The preprints are arranged in alphabetical order according to the surname of the first listed author. Originating institution and date of receipt at the library are given.

- Baldwin, J.A., Martin, P.G., et al., *Physical conditions in the Orion Nebula and an assessment of its helium abundance.* Ohio State/CITA, 14-Dec-1990.
- Bandiera, R., van den Bergh, S., *The evolution of the optical remnant of Kepler's supernova.* Dominion Astrophysical Observatory, 12-Feb-1991.
- Bandiera, R., van den Bergh, S., *Changes in the optical remnant of Kepler's supernova during the period 1942-1989.* Dominion Astrophysical Observatory, 12-Feb-1991.
- Bastien, P., Arcoragi, J.-P., Benz, W., Bonnell, I., Martel, H., *Fragmentation of elongated cylindrical clouds I. Isothermal clouds.* Université de Montréal, 21-Feb-1991.
- Bietenholz, M.F., Kronberg, P.P., *Radio spectral index variations in the Crab Nebula.* David Dunlap Observatory, University of Toronto, 17-Dec-1990.
- Bietenholz, M.F., Kronberg, P.P., Hogg, D.E., Wilson, A.S., *The expansion of the Crab Nebula.* David Dunlap Observatory, University of Toronto, 17-Dec-1990.
- Bonnell, I., Martel, H., Bastien, P., J.-P. Arcoragi, Benz, W., *Fragmentation of elongated cylindrical clouds III. Formation of binary and multiple systems.* Université de Montréal, 21-Feb-1991.
- Bonnell, I., Bastien, P., *The collapse of cylindrical isothermal and polytropic clouds with rotation.* Université de Montréal, 21-Feb-1991.
